***Session 1959-60***

Course in

**CANADA'S  
MAJOR INDUSTRIES**

## CANADA'S MAJOR INDUSTRIES

### **Mondays**

**10 lectures**

As Canada increases in stature as a world trading power, there is a new interest in examining the foundations for our industrial greatness. By selecting ten representative industries and examining their relative importance and growth possibilities, a broad picture of the factors which contribute to this business stature will be presented.

This is the third year of a course, designed primarily for persons concerned with industry, particularly investors, accountants, lawyers, engineers, suppliers, and those whose professions deal with the cross section of industry. The course should also be of interest to students considering employment in the industries to be studied.

Each two hour session will consist of three parts:

- (a) A short introductory lecture by a course director giving a brief outline of the industry, its importance to Canada, and the major companies which make up the industry.
- (b) A technical film showing the production or manufacturing methods used in the industry.
- (c) A talk by a senior representative of one of the major companies in the industry discussing the present problems of the industry. This is followed by a question period.

In every lecture an industry will be presented in terms of its importance to the Canadian economy, its raw materials, manufacturing methods, major products, marketing methods, research and growth possibilities, as well as present problems and possible future developments in the industry. The programme, listing these industries, is shown on the opposite page.
